

## Adair® Landscape Products

Due to its superior physical properties, Adair® Limestone is durable and ideal for paving and landscape applications. Availability in various sizes enables flooring and patio designs not offered in alternate manufactured products. Adair® Limestone is recommended for all at grade applications due to strong salt resistant properties.

The solar reflectance index or SRI is a measure of a materials ability to reflect solar heat. Because Adair® has a high SRI it can be used in sustainable hardscape design to reduce what is called the Heat Island effect in urban centers. This can contribute LEED™ credits in the correct application of hardscape for projects. Besides the LEED™ credits the high SRI will also leave Adair® pavers cool to the touch on a hot summer's day so it can be successfully used on pool designs.

### Custom Hardscape Paving

We have expanded our product line to include custom hardscape paving. This product is perfect for high end outdoor living spaces. We are able to make custom sizes and are offering this product in our Glacial finish and Medium Dressed. Adair® Limestone has been tested to have a high solar reflectance index.

## Landscape Applications

Natural Adair® Limestone is beauty unparalleled; the inherent warmth and strength of Adair® Limestone provides elegance, strength and sophistication. Adair® Limestone is often used for flooring, patio or stair tread applications, and is also ideal for planters and walls. Versatility is a key benefit of quarried stone products - the design opportunities are limited only to imagination.
